

auditor

Securly's Auditor uses the most sophisticated AI engine in student safety to give alerts based on context, not just keywords. Auditor uses sophisticated natural language-learning algorithms to detect negative sentiments that suggest bullying, stalking, violence and self-harm; notifying the closest assigned staff members to the student in crisis.

Features

Real-Time safeguardian notifications

Supporting GMail, Google Docs, Google Drive, Office365 Outlook mail, Word, and OneDrive.

Live documents can be used for spreading rumours, passing notes or penning final farewells. Auditor scans for signs of bullying, self-harm, and violence, letting you know immediately when a student is in crisis.

Nudity Detection

Nudity detection for email attachments by utilising 'ScreenScan', an advanced nudity detection tool that uses image-analysis AI on screenshots of web pages, facilitating the blocking of individual pictures, pages and previously unseen text-free pornographic sites.

24 for Auditor

Don't let critical alerts get buried in your inbox. Our team of highly-trained specialists review flagged activity, 24/7. Pair 24 with Filter, Auditor, and Tipline for the most complete student safety solution in the UK.

AI Driven Confidence Scores

Securly's industry renowned AI assigns a confidence scores to every notification, both an indicator of the notification belonging to one of three categories: grief, bullying, and violence and the probability of the threat being legitimate.

Delegated Admins

Delegate by group or organisational unit (OU) so automated alerts go to the right staff members at the right time, relieving the pressures off IT admins.
