

Making the web safer for students

Keep students safe on all devices both in school and at home, with Securly’s signature cloud-based web filter. Get full visibility into online activity, download or email reports, and receive notifications for flagged content with the most sophisticated AI engine in student safety.

Features

Advanced filtering

Comply with KCSiE and PREVENT legislation and provide a safer, more educational web for all students, on any device, anywhere they go.

All devices, all locations

Chromebooks. iPads. Macs and PCs. Filter safeguards students across any device or operating system at home or in school.

Seamless authentication

Authenticate against GSuite, Azure, and Active Directory and automate group synchronisation.

Instant site learning

With our groundbreaking PageScan technology, new sites are categorized, crawled for adult keywords, and scanned for inappropriate images—all in a matter of seconds.

Scalable and cost effective

Practically limitless bandwidth and concurrent connections to serve even the largest MATs with ease with one of the most cost effective products on the market. Ease cost effective from the smallest school to the largest LA.

Student safety

Go beyond content filtering with an AI that recognizes signs of trouble.

Social media and web searches

Filter monitors for signs of bullying, self-harm and violence across social media and web searches. If a student is suffering or viewing concerning content, you’ll know.

Sentiment analysis

Analyses searches and sites visited with the longest-learning AI on the market.

Granular reporting

Sophisticated AI alerts and activity reports put important information into the right hands.

Delegated staff access

Segment by organisational unit (OU) so alerts go to staff members closest to the student.

Shared reporting

Quickly download, schedule, and email reports by OU.

Policy creation and customization

Features that give schools options, not a one-size-fits-all solution.

Take-home and guest policies

Make sure the right devices and people are filtered and protected on- and off-campus.

YouTube controls

Easily manage student and staff access to YouTube content with just a few clicks.

Policy map and custom groups

Move OUs between policies and allow or deny access to custom groups for set time—all whilst integrating with Google and Azure directories.

Parent access

Give parents control when school devices go home—to view activity, “**pause**” the internet, and set their own filtering rules.

filter + 24

Pair Filter with Securly 24 to ensure critical safety alerts don't get buried in your inbox. The 24 Team reviews flagged activity 24/7, assessing risk around the clock and notifying schools when urgent intervention is needed. 24 is a lifesaver. Literally.
