Cloud-based Apple device management for schools

Securly MDM brings simplified mobile device management to Apple devices. Designed specifically for schools, we've built every feature with your needs in mind. MDM also includes classroom tools to keep students on task and maximize every educational moment spent on school devices.

Features

Custom block lists

Teachers can block specific websites for their classrooms, even sites allowed by the school's content filter.

Plan custom workflows

Set up your own app management workflow and streamline the experience, including defining the steps and who is responsible for them.

Get status updates

Everyone gets status notifications along the way, so teachers know right away when the app has been approved or denied or if more information is requested by the reviewer.

Review apps

Teachers submit app requests using the App Store to find the exact app they need. The request then follows your custom workflow for evaluation and is approved or denied based on your criteria.

Push URLs to students

Teachers can quickly push web pages to individual students or the entire class. Students are able to get on task, and stay on task.

Add self-service apps

Give students the ability to pick and choose what they want to download from a pre-approved list of apps with self-service app installation.

Find web links with ease

The list of links to websites and files added by teachers or admins can be found in one central location.

Submit content (iOS only)

A built-in reader is included for common file formats, so files can be pushed to other apps on the device that can handle the file type.

Lock sites and apps

Launch an app or a specific website on all student devices and lock students in. Web Lock for iOS lets you set Safari to remain on one or more sites, and disable everything else on the device.

Customize app screens

Screen Layouts lets teachers easily arrange apps on students' home screens. Simply drag and drop icons to create the ideal layout for learning. Make it pop with custom wallpaper designs.

Freeze student screens

Teachers can freeze screens with a custom message. When they're ready, they can then release individual students or the entire class at once.
